Our aim is to improve our customers' competitive edge within production and production development.

Eltronic plays a proactive role in project development, including:

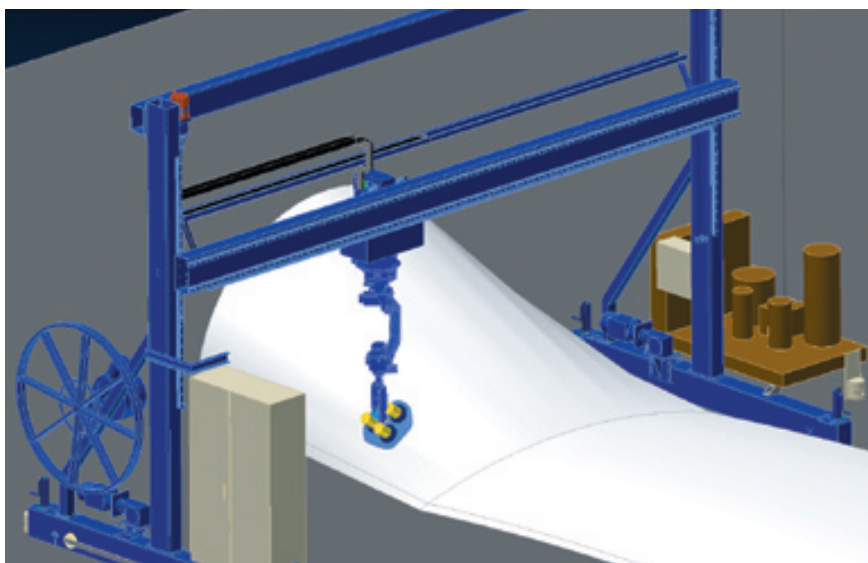

- consultancy
- design
- construction
- implementation
- qualification
- maintenance

These innovative systems are ideal for Lean Production techniques, featuring high quality and operational efficiency.

10 years of experience within international technological R&D projects mean that Eltronic has developed specialist skills within this field – as evidenced by projects completed for the most advanced processes and new technologies for the factory of the future.

Eltronic deploys a unique project model with high levels of documentation and traceability, to ensure top quality for all processes.

If your company aims to be on the cutting edge of production technology and improve its competitiveness, Eltronic is the ideal partner.
