

Press release, Danish Fish Tech Group, March 2019

Largest Pavilion of Denmark ever is ready for SPG 2019

At SPG 2019, 36 Danish companies covering a large part of the value chain in the fishing industry are ready to showcase their solutions. The Pavilion of Denmark has grown year by year and in 2019, it is the largest ever to represent Danish competencies at SPG.

The Danish suppliers are bringing solutions built on a long tradition and strict requirements within the fishing and aquaculture industry in Denmark.

“For years Danish suppliers have been front runners in developing new technology and constantly focusing on meeting the ever-increasing demand on the world markets making them leading suppliers to the industry,” says Martin Winkel, Head of Danish Fish Tech Group, organizer of the Danish pavilion and Denmark’s largest export network for suppliers to the global fishing, aquaculture and seafood processing industries.

Solutions that meet demands

With 36 Danish companies present, the Pavilion of Denmark is the largest ever at SPG and the suppliers are offering quality solutions and equipment that cover a large part of the value chain in the industry.

“The companies are showcasing solutions that meet the increased demand for automation, sustainability, long lasting equipment, food safety and strict hygiene as well as innovative packaging solutions and waste handling to maximise the value generated from fish,” says Martin Winkel.

From waste to valued product

The handling of waste products in particular has over the last five years become increasingly important to the fish processing industry. What was earlier looked upon as waste and a cost has now turned into a valuable product.

“The industry has discovered that waste can actually add new profitable products to the portfolio when treated as a valuable part of the production. If done right upstream, waste is eliminated and turned into high quality profitable products used in e.g. the health or pharmaceutical industry. The environmental impact is also reduced significantly when waste is no longer leaving with the process water,” says Kristina Joensen, CEO, Dantech - Danish Technology Center, that supplies waste water treatment solutions to the fish processing industry worldwide.

Strong green profile

Also, the Danish company Landia that supplies grinding tanks for producing silage is experiencing a high demand for solutions that help the fish industry maximise the use of the fish.

“The breeders are really focusing on the environmental aspect and making use of all of the fish as part of their green profile. Norway has for many years been ahead of the development due to demands from public authorities. Now an increased number of countries are looking for solutions that can help them convert waste into silage instead of e.g. burning or landfilling the waste,” says Jesper Borch Svendsen, Area Sales Manager – Fish, Landia.

About Pavilion of Denmark at SPG 2019

Meet the 36 Danish suppliers at SPG 2019 in Brussels, Belgium on 7-9 May 2019 in Hall 3 booth 5740 & Hall 4 booths 5819, 5835, 5905, 5911, 5915, 5927 og 6015:

- Aqua Culture Supply ApS
- Beck Pack Systems A/S
- Boleto ApS
- Cabinplant A/S
- Carsoe A/S

- CTi Process A/S
- Danfish International
- Dantech - Danish Technology Center ApS
- Dantech Freezing Systems A/S
- DK Transportbånd ApS
- DSI Freezing Solutions A/S
- GEA Process Engineering A/S
- Glud & Marstrand A/S
- Hvalpsund Net A/S
- Haarslev Industries A/S
- Hydrotech by Veolia
- Intech International A/S
- IRAS A/S
- JS Proputec A/S
- Kaj Olesen A/S
- KEN Hygiene Systems A/S
- Kyocera Univerco Tooling A/S
- Kaas Byggeindustri A/S
- Landia A/S
- NTF-Aalborg A/S
- Oxyguard International A/S
- Plano Pack A/S
- Plus Pack A/S
- Randers Reb International A/S
- RUNI A/S
- Scan Board a/s
- ScanBelt A/S
- Semi-Staal A/S
- Smurfit Kappa Danmark A/S
- System Cleaners A/S
- Uni-Food Technic A/S
